Fallacy mentioned (but did not rely on) the no-brainer solution to the fine-tuning problem that is regarded as the most plausible by most physicists and cosmologists: Our universe is just one of an unlimited number of individual, uncreated universes collectively called the multiverse that extend for an unlimited distance in all directions and for an unlimited time in the past and future. We just happen to live in the particular universe that is suited for our kind of life.

In 2011, I published a popular-level book, The Fallacy of Fine-Tuning: Why the Universe is Not Designed for Us. It investigated a common claim found in contemporary religious literature that the parameters of physics and cosmology are so delicately balanced, so "fine-tuned," that any slight change and life in the

Implicit in the theistic argument for fine-tuning is the belief that the universe was created with humanity in mind as its ultimate end product.

Technological devices are paradigmatic examples of fine-tuning. Whether they function as intended depends sensitively on parameters that describe the shape, arrangement, and material properties of their constituents, e.g., the constituents' conductivity, elasticity and thermal expansion coefficient.

The Fallacy of Fine-Tuning: Why the Universe Is Not Designed for Us. Description. Drawing on the findings of modern physics and cosmology, numerous authors have argued that it would have taken only slight changes to some of the universe's physical parameters to make life, as we know it, extremely unlikely or even impossible.

In his book *The Fallacy of Fine-Tuning*, Stenger claims that arguments theists make about fine-tuning can be easily refuted. Following the tone of my blog, I will try to discuss this issue in a non-technical way. The astrophysicist Luke Barnes wrote a long technical article refuting Stenger's claims which I highly recommend.

Fine-Tuning (Stanford Encyclopedia of Philosophy)

A change in one physical constant may be compensated by a change in another, suggesting that the apparent fine-tuning of the universe is a fallacy because, in hypothesizing the apparent fine-tuning, it is mistaken to vary one physical parameter while keeping the others constant.

What mistakes are made in the fine-tuning debate? Whether errors of fact, opinion, logic, or extrapolation, where are the pitfalls in fine-tuning? Is there really fine-tuning in nature, from fundamental physics to cosmology, and if so, how to perceive and explain them without falling foul of the fallacies?

It must be due to some intelligent, powerful Being -- and that's what God is. The fine-tuning argument is a modern, up-to-date version of this argument. It takes off from something that serious physicists, religious or not, tend to agree on. Here's how Freeman Dyson put it:

The Fine-Tuning of the Universe for Intelligent Life

"In *The Fallacy Of Fine-Tuning*" Stenger brilliant demolishes the argument from design and fine-tuning. A physicist by trade, Stenger put his knowledge to work in attempting to answer the big questions of the universes origins and true nature. The book is articulated well with it's share of humor and analogies (so laymen can understand).
